TAK dla OZE

YES for RES ;)

30 lat temu – 26 kwietnia 1986 roku w Czarnobylu nastąpił wybuch elektrowni jądrowej.

W wyniku katastrofy skażeniu promieniotwórczemu uległ obszar 125 000 – 146 000 km² na terenie Białorusi, Ukrainy i Rosji, a chmura radioaktywna rozprzestrzeniła się po Europie.

Przesiedlono ponad 350 000 osób. [1] Zginęło w wyniku fali uderzeniowej, na chorobę popromienną oraz w wyniku powikłań kilkaset tysięcy osób, choć liczby te w zależności od źródeł różnią się. Niszczące skutki katastrofy będą odczuwalne jeszcze przez kilkadziesiąt – kilkaset lat (długi okres połowicznego rozpadu pierwiastków promieniotwórczych).
